Montreal, QC | 514-378-0230 | NicholasXydis@outlook.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

EDUCATION

Concordia University

Certificate of Science and Technology (Incoming Bachelor of Computer Science)

- Member of the Software Engineering & Computer Science Student Society (SCS)

Expected 2029

Montreal, QC

EXPERIENCE

IT Administrator and Operations

Centre D'Auto Allard

April 2022 - February 2026

Montreal, QC

- Designed, developed, and deployed the company's production website, serving 50+ daily users and contributing to a 55% increase in customer appointments. | [Demo](#)
- Implemented a SQL database to manage inventory, operational records, and internal business data, reducing manual tracking time by 7 hours per week.
- Maintained and troubleshooted company computers, networking equipment, and security systems, resolving hardware and connectivity issues to support daily business operations.
- Liaised with customers, automotive parts suppliers, and service vendors to coordinate parts procurement, scheduling, and operational communication, ensuring smooth day-to-day business operations.
- Managed Google Business Profile and Google Analytics, generating 40+ new customer reviews and 1,200+ additional monthly profile views.

PROJECTS

BankLite | C#, ASP.NET Core, PostgreSQL, Docker, Linux, JavaScript | [Demo](#) | [GitHub](#) March 2026 - July 2026

- Independently designed, built, and deployed a full-stack banking application with secure authentication, real-time peer-to-peer transactions, an AI-powered financial assistant, and bilingual (English/French) support.
- Load tested with k6, processing 533,000+ requests at 1,184 requests/second with a 0.00% failure rate under 1,000+ concurrent users.
- Architected and operated a hardened Linux VPS using Docker, PostgreSQL, Nginx, Cloudflare, and GitHub Actions CI/CD, with 24/7 monitoring and seven specialized rate-limiting policies.
- Implemented ACID-compliant PostgreSQL transactions, 479 automated tests (445 backend, 34 end-to-end), and OWASP ZAP security testing.

CS Resource Hub | Python, TypeScript, React, Vite | [Demo](#) | [GitHub](#)

June 2026 - July 2026

- Engineered a Python-powered data platform helping Canadian Computer Science students discover 334+ curated resources, with a single JSON dataset that deterministically generates the website and project artifacts.
- Developed a data pipeline that validates a curated dataset against a JSON Schema, performs duplicate and link health checks, generates 6 project artifacts, and enforces CI quality gates for open-source contributions.
- Orchestrated a CI/CD pipeline using 14 GitHub Actions workflows, approval-gated Cloudflare Pages deployments, scheduled health checks, and UptimeRobot monitoring.
- Delivered 375 automated tests (220 end-to-end, 105 frontend unit, 50 pipeline) across 5 browsers and 22 viewports, with CodeQL and perfect Lighthouse scores across all categories.

TECHNICAL SKILLS

Languages: C#, Python, TypeScript, SQL, JavaScript, Java

Frameworks: ASP.NET Core, React, Next.js, Tailwind CSS, Entity Framework Core

Systems & Databases: Linux, Windows, PostgreSQL, SQL Server

Tools & DevOps: Docker, Git, Azure, Bash, PowerShell, GitHub Actions, Unity

Additional: English & French (Bilingual), Microsoft Office 365

ACTIVITIES

- J.P. Morgan Chase | Software Engineering Virtual Experience Program (Forage)
- Mastercard | Cybersecurity Virtual Experience Program (Forage)
- Akuna Capital | Options 101 Certificate
- Built Doodle Duel, a full-stack drawing game, at the 2026 Hack the Mountain hackathon
